DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 1, 3-6 and 9-11 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1, 3-6 and 9-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hansen in view of Rubin et al. Note that the recited preamble recitation, "for an air brake system" of claim 1 and the recited "proportioning" of claims 6 and 9 are afforded no patentable significance, since the brake and the proportioning valve structure has not been recited in the body of the claims 1 and 6 and 9. The patent to Hansen is readable on the above claims with the single exception of having a) an interference or snug fit between a first and second valve portion

Application/Control Number: 09/435,570

Art Unit: 3753

and b) valve portions made of non-metallic material. The patent to Rubin et al teaches the above exceptions. In view of the teaching of Rubin et al, it would be obvious to one of ordinary skill in the art, at the time the invention was made, to utilize an interference or snug fit for a threaded portion to replace the threaded portion of the second portion 48 and threads 20 of the first portion 4 as taught by the snug fit element 14 (a first portion) and element 34 (a second portion) element as recited in column 2, lines 9-17, if desired. The check valve, spring and follower are readable on elements 30, 26 and 6, 34 or 36, respectively of Hansen. Elements 6 and 36 teach a continuous shoulder. In the patent to Hansen element 66 is readable on the housing with a bore or blind opening 74 to receive the valve member 4, and the recess is readable on the opening defined by threads 20. Also, it would be obvious to one of ordinary skill in the art at the time the invention was made to make valve portions 4, 30, 48 and 66 out of non-metallic material as taught by elements 12, 14, 16, 20, 29, 32, 38, 44 and 48 of Rubin et al, if desired. Such teachings provide no unobvious or unexpected results. Whether the passages 24 are circular or non-circular is merely a matter of obvious design expedient to one of ordinary skill in the art, at the time the invention was made.

Allowable Subject Matter

Claims 2, 7 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
